PROFESSIONAL SUMMARY

Senior software engineer with seven years in **Unity and C#**, shipping interactive video products on Meta Quest, PICO, iOS, Android and Android TV. Led YBVR's client engineering from a prototype to a product broadcasting EuroLeague basketball in VR, built and led the eight-person team that shipped it, and designed the company's multi-agent AI assistant. Now building two games with AI-assisted workflows.

PROFESSIONAL EXPERIENCE

Lead XR Project Engineer / Lead VR Software Developer | YBVR

Apr 2019 – Jul 2026, Madrid, Spain

YBVR builds interactive video streaming apps and a white-label SDK for iOS, Android, Android TV and XR headsets. Lead VR Software Developer and client team lead 2019–2025; Lead Project Engineer 2025–2026 (architecture, prototypes, AI). I led the client side of Xtadium, its flagship product on Meta Quest, from prototype through release and live iteration.

- Took Xtadium from prototype to a shipped Meta Quest product (on the Meta Store since Nov 2022) that broadcasts EuroLeague games in VR, including Real Madrid–Barcelona, and runs live at events such as the Mutua Madrid Open.
- Started as the only client engineer, hired all 8 engineers of the team and line-managed it from 2020 to mid-2025: 1:1s, mentoring, code reviews and the architecture and coding standards.
- Held a firm 60 fps on the Oculus Go and 90/120 Hz on Quest, from the Go to Quest 3 and PICO 4, by profiling on device, managing CPU/GPU levels and moving video and key UI onto Compositor Layers.
- Shipped around 20 apps through App Store Connect, Google Play Console, the Meta Store and VIVEPORT, with Remote Config, feature flags, A/B testing, Addressables content drops, Meta in-app purchases and Crashlytics in every app.
- Architected the native multi-platform SDK in C++, Java and Kotlin under the Unity layer, with Vulkan and OpenGL ES plugins that stream video buffers straight to the GPU; also shipped for Android TV. Trained partner companies to integrate it.
- Designed and launched a multi-agent AI assistant over the video catalogue (Google ADK, Vertex AI, Gemini, RAG over video embeddings, FastAPI on Cloud Run), production-ready in one month and in use by real users, with model routing, prompt caching and offline test harnesses.

Software Developer | Indra

Nov 2018 – Apr 2019, Madrid, Spain

- Maintained an existing VXML voice-server system and wrote Bash and Python tools for QA, including an automated false-positive detector.

Software Applications Engineer | Valid

Nov 2017 – Nov 2018, Madrid, Spain

- Built internal tools to create, analyze and test eUICCs; maintained a C++ eUICC emulator for Windows and .NET desktop apps in C# and VB.

ADDITIONAL EXPERIENCE & PROJECTS

Independent Game Developer | Self-employed

Jul 2026 – Present, Madrid, Spain

- CluckWars (in development): four-player multiplayer arena game in Unity 6 on Photon Fusion 2 and Unity Gaming Services. github.com/mtejedorg/CluckWars
- Saint Manick (vertical slice, ten zones): 2.5D beat-driven action roguelite in Godot 4 with an automated test suite. github.com/mtejedorg/SaintManick2026
- Both built solo with AI coding agents; also publishing cvkit, open-source Claude Code skills for job applications.

CORE COMPETENCIES & TECHNICAL SKILLS

Languages: C#, C++, Java, Kotlin, Python, GDScript, HLSL, GLSL, Bash

Engines & platforms: Unity 6, Unity 2022.3 LTS, Godot 4, Meta Quest, PICO, Android XR, iOS, Android, Android TV

Architecture & XR: Meta XR SDK, OpenXR, Compositor Layers, Zenject, Addressables, UniTask, UI Toolkit, data-driven UI, Vulkan and OpenGL ES plugins

Multiplayer & live ops: Photon Fusion 2, Photon Realtime, Unity Gaming Services, Remote Config, A/B testing, Firebase Crashlytics, telemetry

AI, cloud & tooling: Google ADK, Vertex AI, Gemini API, RAG, FastAPI, Claude Code skills, Unity MCP, GCP, Docker, Jenkins, Git, Agile and Scrum

EDUCATION

Master's Degree in Video Game Design and Development | Universidad Complutense de Madrid (UCM) 2016 – 2017, Madrid, Spain

Capstone: a publicly exhibited beat 'em up vertical slice in Unity with combat and animation state machines and input buffering.

Degree in Audiovisual and Multimedia Systems (Telecommunications) Engineering | Universidad Rey Juan Carlos (URJC) 2012 – 2017, Madrid, Spain

Focus on computer vision, robotics, signal processing and real-time 3D simulation. Additional title: Robotics and Computer Vision specialization (URJC).

LANGUAGES

- **Spanish:** native
- **English:** fluent, full professional
- **German:** intermediate (B1); German family and nationality
